Carton Gravity Flow Rack

Unique "flow" design uses gravity to slide cartons to front for easy access. Loads from the back to ensure that first inventory in is the first inventory out. Tracks can be set at any width to accommodate varying carton sizes. Box guides are used between each pair of roller tracks. Each gravity flow storage level includes four pair of roller tracks with five box guides. Additional roller tracks can be added depending upon carton sizes being stored. Double-depth units are two single units bolted front-to-back offering greater capacity.
